

Materials Education
SYMPOSLIA **2018**

10
YEARS

9th North American Materials Education Symposium

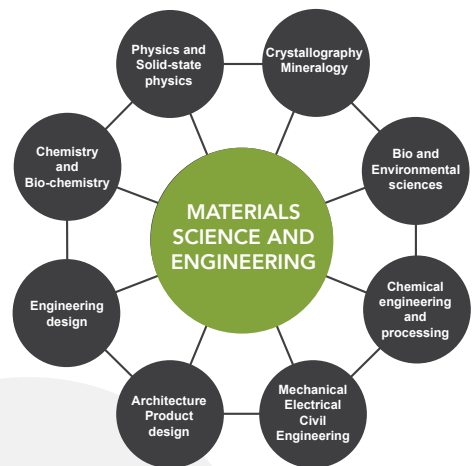

University of Michigan, Ann Arbor, 16-17 August, 2018

Theme: Personalized Learning: Delivering a diverse curriculum in a student centric environment

Symposium aims:

- To **share ideas, innovations, experiences**, successes and failures in university-level materials teaching
- To **provoke productive discussion**
- To **expand the links** that form such a key feature of the Materials Community

The interdisciplinary nature of materials teaching is always a major focus, exploring how materials can link different subjects together, and learning from experiences of teaching materials and processes across the curriculum.

“A must for all serious materials educators”

William Callister (Utah)

“What a pleasure to share ideas and best practices within a context that is both collegial and rigorous”

James Shackelford (UC Davis)

“I think that the quality of the talks is very high. People are very friendly, there are lots of opportunities for informal discussion”

Lorna Gibson (MIT)

“A truly outstanding forum for exchange of ideas and experiences”

Mark Asta (UC Berkeley)

“Here, there is a genuine sharing of ideas and an exploration of new ways of doing things. It’s like working together in a large family team”

George Smith (University of Oxford)

After nine successful years, the Materials Education Symposia are probably the biggest international meetings of university-level Materials Educators in the world. Join two days of talks, discussion sessions, networking, poster sessions, and a great social program with plenty of opportunities to meet new people and exchange ideas.

Early bird deadline: April 30, 2018
